

Intelligent Process Automation (IPA) Solutions for Invoice Processing

Eliminate Up to **80%-90%**
of Your Manual Invoice Data Entry

Why Automate the Processing of Invoices?

Automating invoice processing adds value to your ERP/ Financial System and your Document Management System. You can significantly cut operational costs, reduce manual data entry and errors, eliminate duplicates, prioritize early payment discounts and automate the matching, coding and approvals of invoices for PO based and non-PO based invoices.

We do this by:

- Capturing invoices no matter the source (scan, email, EDI, spreadsheet data).
- Extracting data using Optical Character Recognition (OCR) technology that eliminates data entry.
- Validating data before exporting to your system of record.
- Load balancing the work.
- Performing a two-way or three-way match.
- Automating the review and approval process using workflow technology.

In addition, you can manage the entire capture and approval process as SLA's can be established to track the work performed.

About Infoaxis

Document Imaging Group (DIG), a division of Infoaxis is a global leader in Advanced Data Capture and Intelligent Process Automation solutions. Through our state of the art technologies, clients can leverage Conversational AI and Natural Language Processing, Mobile and Advanced Data Capture, Robotic Process Automation (RPA), Analytics and Process Intelligence along with Customer Communications and eSignature under one, cohesive platform that can work independently or in conjunction with existing processes and systems.
